1 • The opportunity

Players leave, and studios don't know why

1 · The opportunity

≈ 25%

median day-1 retention — 3 of every 4 new players never return

Every lost player is wasted acquisition spend — and rising.

Retention is now the difference between a studio surviving or not:

- user-acquisition costs keep climbing
- a small lift in retention compounds across the whole funnel
- but **understanding** churn needs data science

Who's left out

Large publishers have in-house data teams. The **90%+ of studios that are small or indie** can't afford one — so they fly blind.

2 · Our solution

What PlaySignal does

2 · Our solution

A plug-and-play retention layer for your game:

- connect in an afternoon (lightweight event SDK)
- predict which players are about to churn — **before** they do
- trigger the right retention action (offer, nudge, reward)
- dashboard the whole funnel — no data scientist required

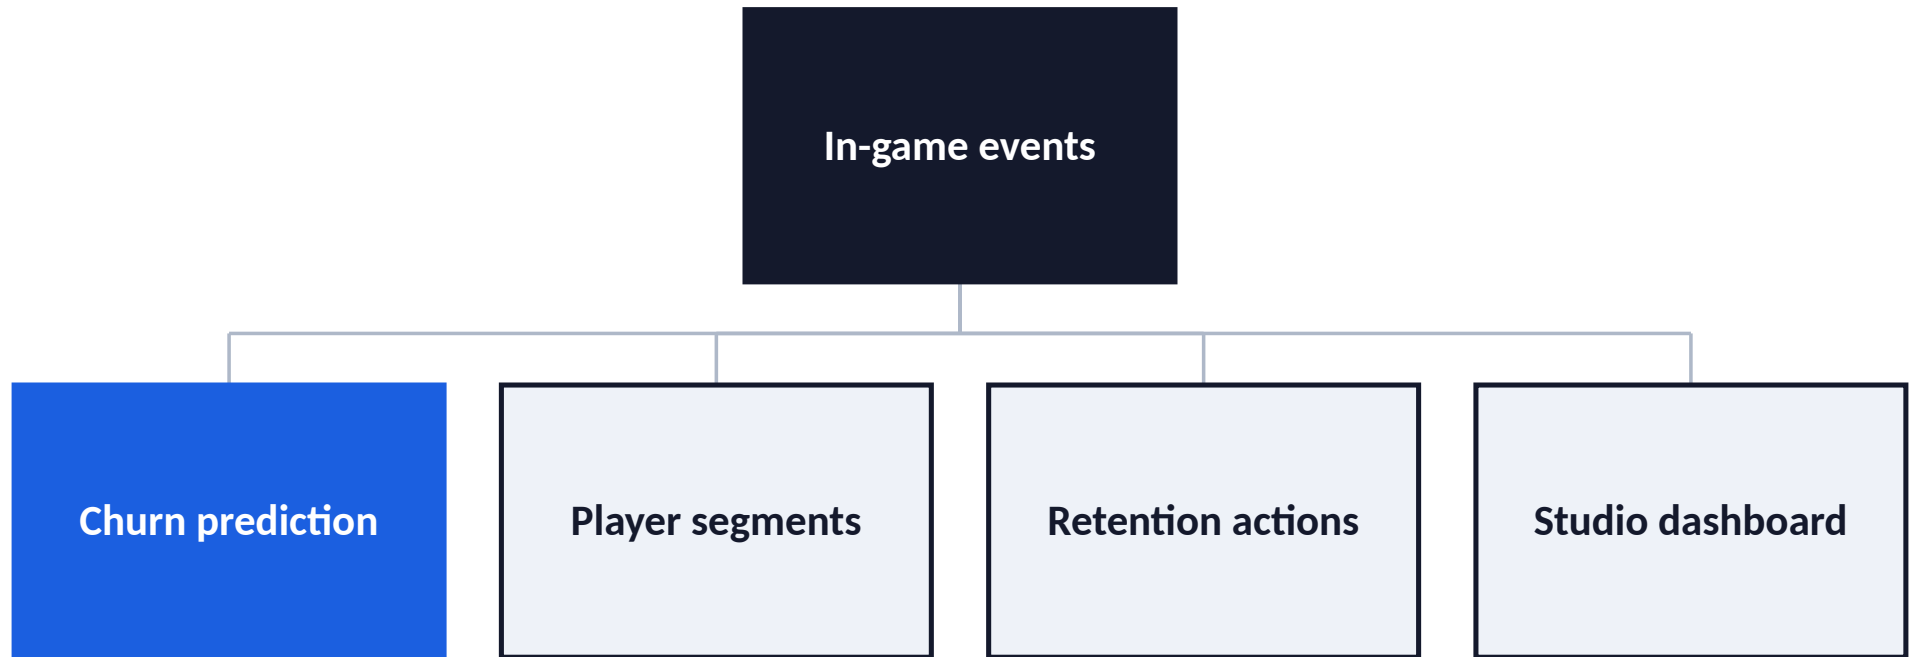

In one line

Enterprise-grade player-retention analytics, priced for indies.

How it works

2 · Our solution

3 · Market & model

A large, growing market

3 · Market & model

€90 B

global mobile-games market — retention tooling grows with it

Segment	Size	Note
TAM — global mobile games	€90 B	total market
SAM — indie & mid-size studios	€1.2 B	analytics spend
SOM — 3-year target	€18 M	≈ 1.5% of SAM

Why studios pick us

3 · Market & model

	PlaySignal	Big suites	In-house
Setup time	hours	weeks	months
Needs a data scientist	No	Sometimes	Yes
Churn prediction built-in	Yes	Add-on	Build it
Price for indies	€149/mo	€1 k+/mo	dev time

Simple, tiered pricing

3 · Market & model

€149/mo

to start — free to try, scales with the studio

Plan	Price	For
Free	€0	< 5 k monthly players, 1 game
Pro	€149/mo	growing studios
Studio	€499/mo	multiple titles + automated actions

4 • Financials

Three-year projection

4 · Financials

	Year 1	Year 2	Year 3
Paying studios	40	180	500
Revenue	€120 k	€560 k	€1.6 M
Costs	€260 k	€520 k	€1.1 M
Net result	-€140 k	+€40 k	+€500 k

Break-even

Reached in **month 20**, at 120 paying studios — before the Studio tier and automated actions ramp.

€300 k

seed round — 18 months of runway to launch and reach break-even

Use of funds

- 55% engineering & the ML model
- 30% growth and studio onboarding
- 15% operations & runway

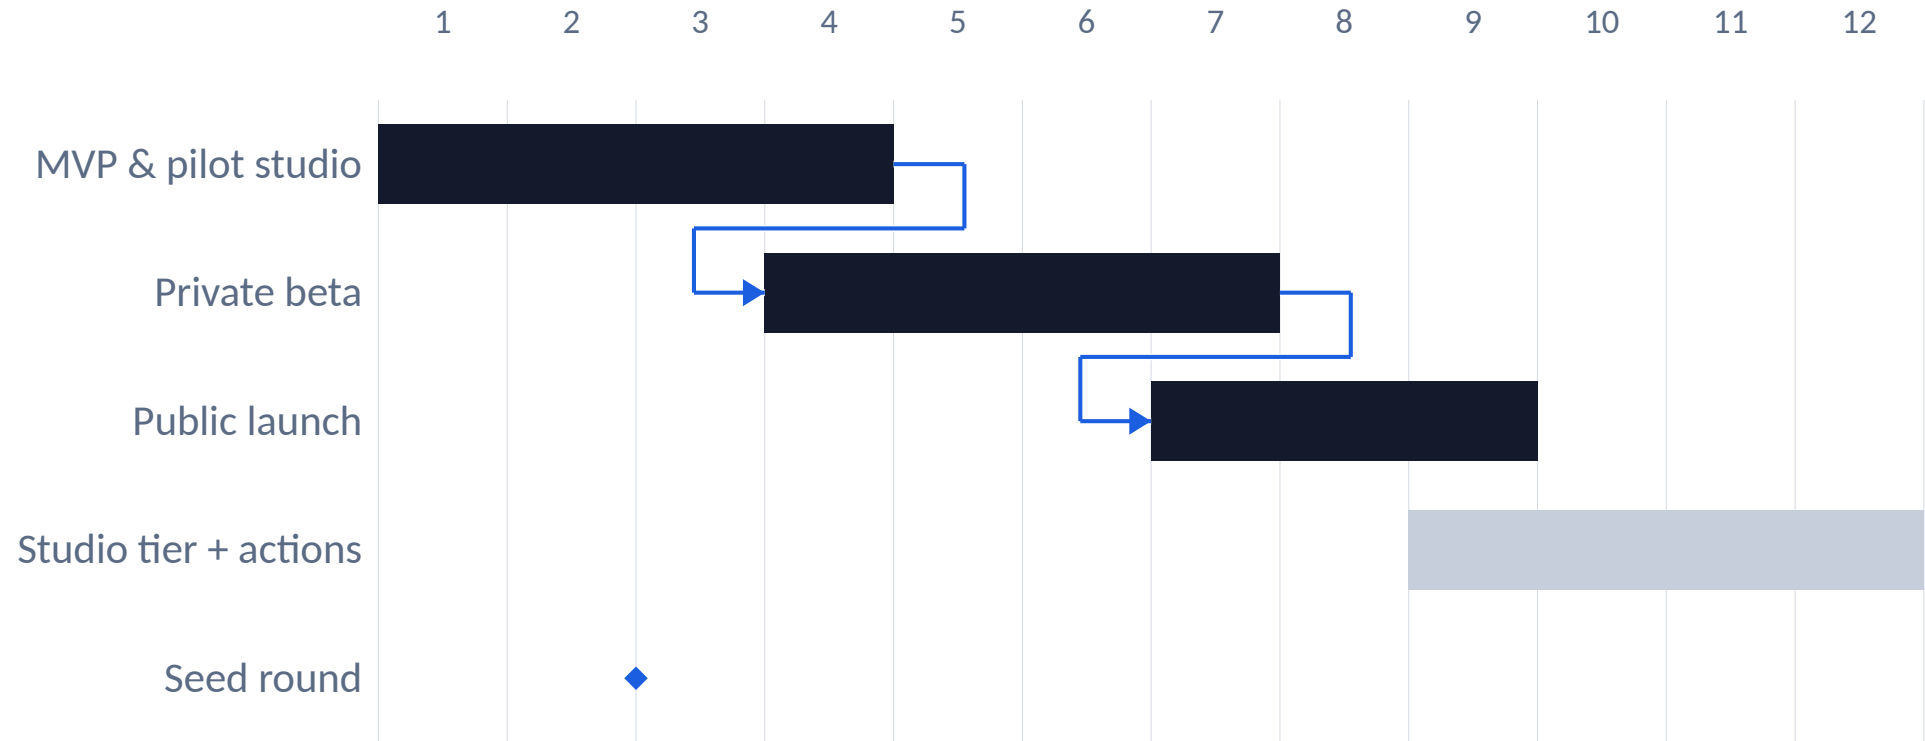

Milestone

Funds take us from MVP to a paying base past break-even, de-risking a Series-A conversation.

5 · Roadmap & team

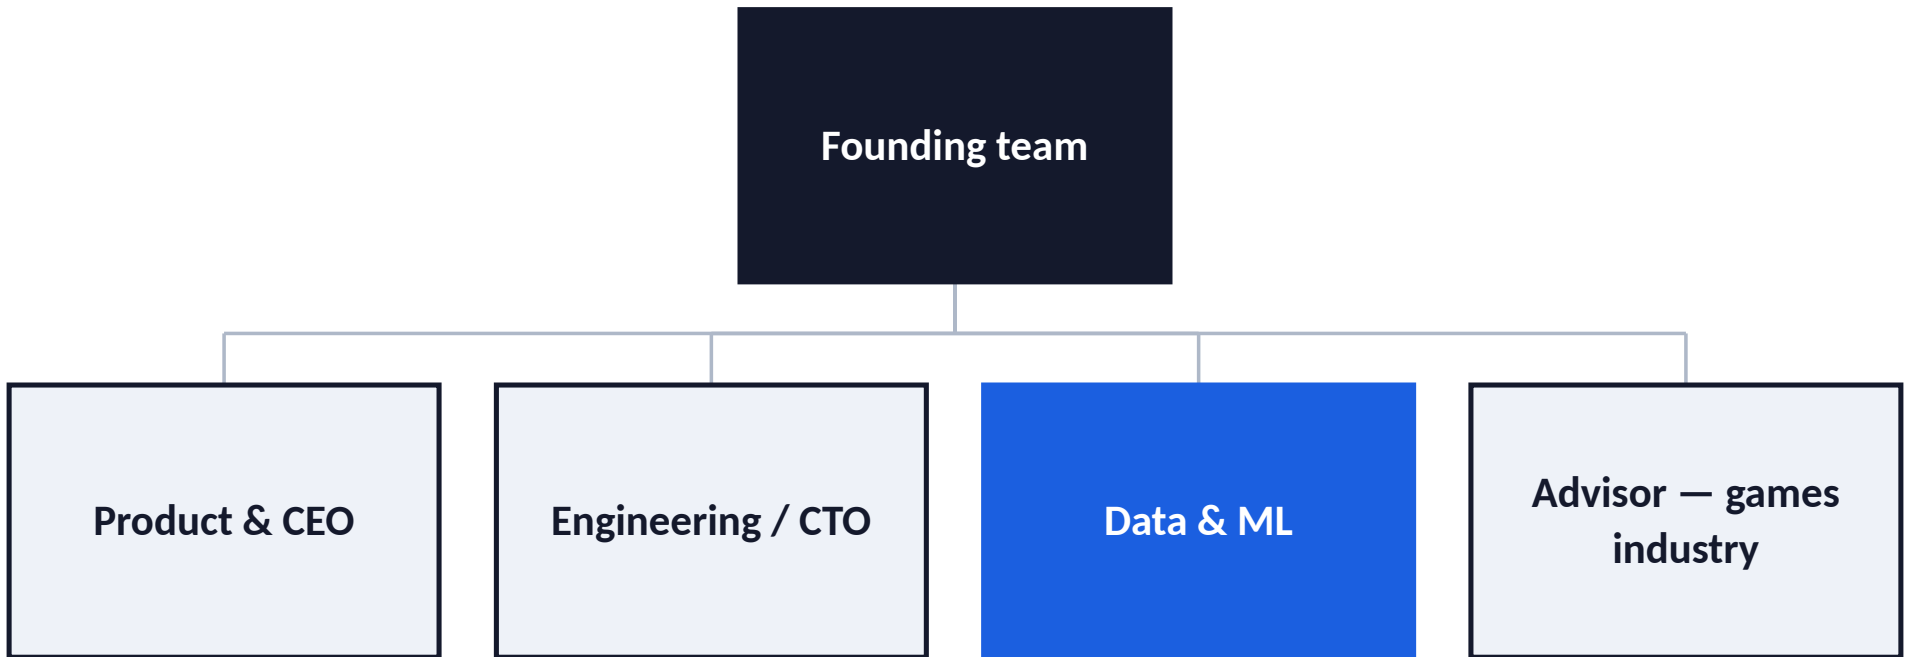

Roadmap — first 12 months

5 · Roadmap & team

The team

5 · Roadmap & team

Give every indie studio a data team.
