

TITLE

BFP MODALITY: CONVENTIONAL OR LINKED TO PROJECTS

CALL: DATE OF SUBMISSION (ORDINARY OR EXTRAORDINARY AND
ACADEMIC YEAR)

STUDENT: NAME AND SURNAME

TUTOR: NAME AND SURNAME

CO-TUTOR: NAME AND SURNAME

DEGREE: DEGREE AND SPECIALIZATION

Acknowledgements

(optional)

Each kind of heading in this template has a style attached to it (title 1 to 5, plus one for long quotations). In LaTeX you get that for free: use `\chapter`, `\section`, `\subsection` and so on, and the index below rebuilds itself on every compile – there is nothing to refresh by hand.

ABSTRACT

Brief summary of the BFP in English. It is recommended to describe in a few words the topic, your research and the conclusions you have reached.

Keywords: four or five keywords

RESUMEN

Breve resumen del TFG en español. Se recomienda describir en pocas palabras la temática, el trabajo desarrollado y las conclusiones.

Palabras clave: cuatro o cinco palabras clave

1. INTRODUCTION

1.1 Justification and context

This section must explain the sense of this BFP within a specific field of study (animation, game studies, computer graphics, renewable energy. . .) and what it aims to contribute. The discourse should make it clear why this topic is relevant.

1.2 Motivation

This is the only place of the BFP where you can write in the first person. Here you explain the personal reasons that led the author to write this BFP.

1.3 Problem statement

Here you must explain which is the problem or problems that your BFP is going to address. You can use as many subtitles as necessary.

1.4 Objectives

They are usually divided into general objectives (the main focus of your paper) and other specific objectives, complementary to the general one.

2. STATE OF THE ART

In a BFP the author joins a conversation which has already started, and it only makes sense to join a conversation if we keep up to date with everything that has been already discussed or made. This section provides that update – what others have achieved before the author arrived and which are the essential concepts for understanding the field. It is crucial and is based on careful research.

2.1 First chapter of your state of the art [Ex.: Psychology of terror, Electromagnetic waves, etc.]

The state of the art must be structured from the most general information to the most specific.

You can devote as many titles and subtitles as you need. Remember to use the heading commands provided by this class.

3. METHODOLOGY

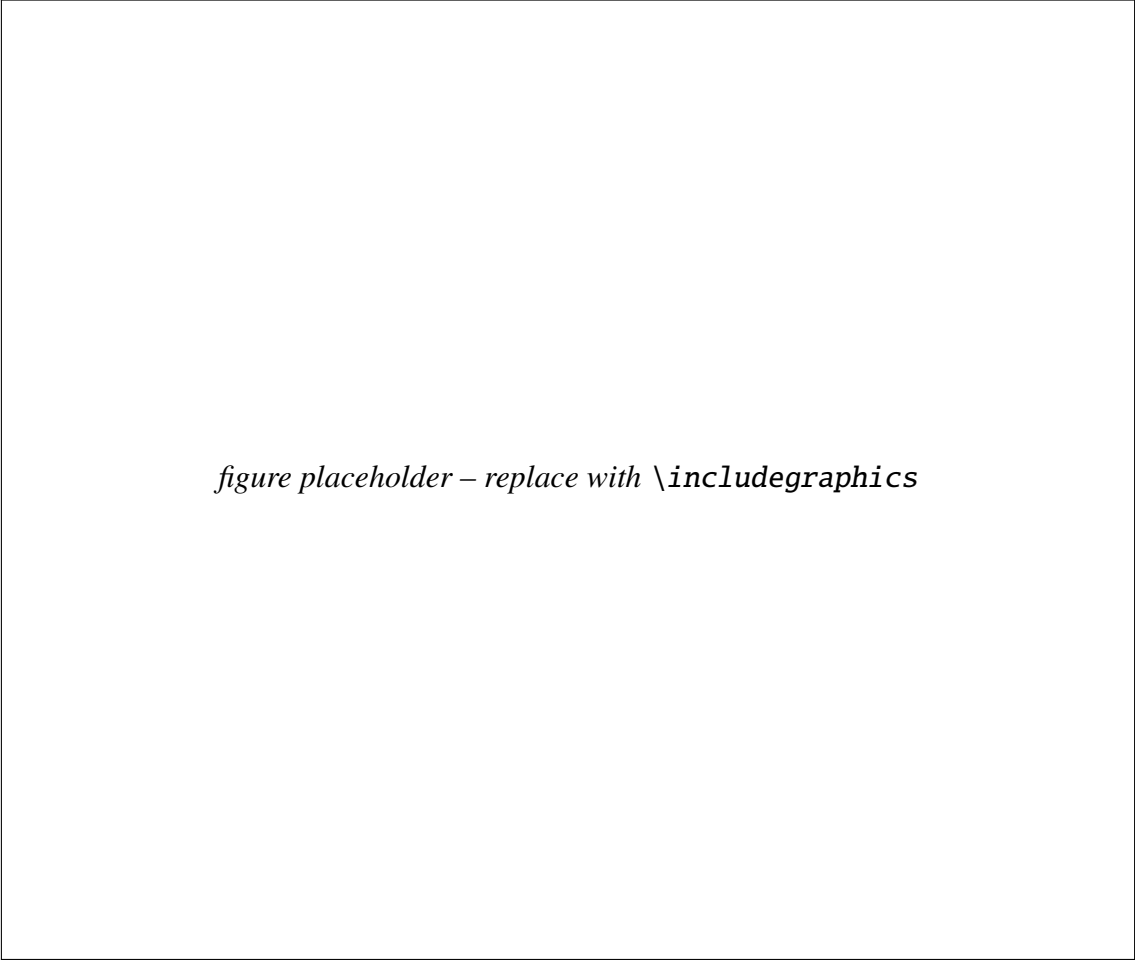

figure placeholder – replace with \includegraphics

Figure 1

This chapter explains how the knowledge presented in the state of the art will be reflected in the development. If the development involves a product, then you should explain why some particular features were chosen instead of others, which were the criteria that determined that choice.

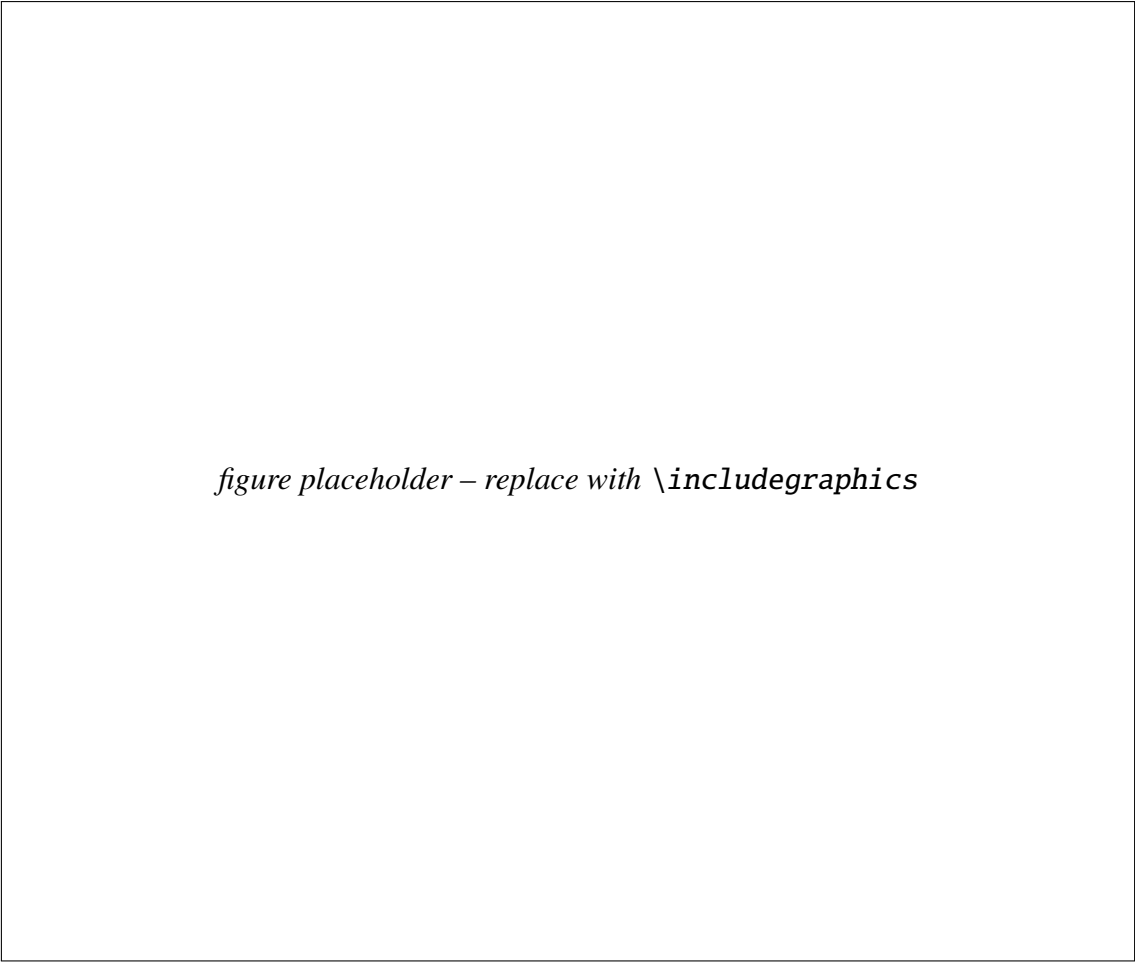

figure placeholder – replace with `\includegraphics`

Figure 2. A caption for the second figure. Source: Author (2026).

You can add as many titles as you need.

3.2 Employed technologies

4. DEVELOPMENT

This chapter is intended for students to conduct their own exploration, relating it to the state of the art described above.

Here you can describe the different phases of the work, relating them to the topics covered in the state of the art (“this has been worked on in this way, differently or similarly to what the theory says / other practical works analysed in the theoretical framework have done”).

These are only examples. You can find many different types of BFP development.

You can add as many titles as you need.

4.1

5. CONCLUSIONS

This section can be read independently of the rest of the document. It should summarise the main topics of your research. The order in which the ideas are presented may differ slightly from that of the document, and may be organised according to different criteria.

Please note that new information should never appear in the conclusions (this is the purpose of the development section), and that the tone of the writing must be academic – it should not be included whether the work was important or not personally for the student. As in the rest of the BFP (excepting the motivation), the first-person singular must not be used.

5.1 Discussion

This section mentions what could not be covered during the development of the BFP. This may include any problems that arose during the realization of the BFP: someone did not respond to an interview request, a technical problem occurred that prevented the completion of a certain section of the BFP, etc.

5.2 Further research

This section presents further research lines of this BFP in the future.

It should include whether the present work can be replicated for other examples, or to what directions it can be extended in the future.

6. REFERENCES

6.1 Bibliography

It is presented in alphabetical order in APA format. Here it is generated from `refs.bib` by `biblatex`, so the ordering and the formatting are not yours to maintain (Hevner et al., 2004; Kimball & Ross, 2013; Loshin, 2008; Peffers et al., 2007; Wieringa, 2014).

Glossary

The BFP is a document intended for someone who is not an expert in the subject. Therefore, here can be listed all the specific vocabulary that may be unfamiliar to someone outside the field of expertise (rig, game loop, neural network) but that would hinder the discourse of the state of the art.

It should be listed in alphabetical order and you do not need to cite references.

There may be BFP where this section is not necessary.

Appendix

Include here all cited material that takes up too much space to be included in the body of the text: any graph, sketch, statistic, line of code, reference text, survey, interview, or technical note that is not directly related to the development and conclusions of the BFP but that you wish to add as reference material.
